Not too long ago I put on my virtual shoes, but I am still fighting the good old horse power. I recently upgraded to the latest CF 5.5 ProAds and Photoshop CS5 (from CS4).As I've upgraded the LR power usage is increased by about 100%! The file size went from 1.5GB to now 4.75GB before uploading. Which makes the product unusable on a P5 system.
The Adobe bluetooth client finally seems stable with the CF 5.5 and 5.6 software. Using both the built in software and the adapter the result is satisfactory. I think they really screwed themselves with this stupid bluetooth bug.
The multi-core is great even with the new software and it is significant improvement over the earlier versions of DNG raw processing. One thing I do not like about the new software is the one-click processing. It is one-click. But you have to activate it first and run it by pressing the one button then pressing save. Yet another step in ridiculous Apple fashion. An iterative or incremental one-click would be more logical.
FAR BETTER, however, is the design and speed of LR, as well as the processing speed. I would never have bought any other raw converter for the speed when we are using the CFV platform. Photoshop CS5 looks and feels like a new product. Especially on the Mac platform - the scrolling is smooth and the look is cleaner. I like it. I have been using it for a couple of months and the learning curve has been greatly reduced.
So far, the hard drive space is being used for thumbnails only in my native DNG or ORF formats which are saved as.PSD,s and then viewed in either CF or OS 8.x. I also haven't used the new

feature yet.

I really hope there is a Lightroom update next week. I am also eagerly awaiting the Lexar CS4 cards to be released - what a difference the CF will make when available.

Back to work for just a couple more days until my vacation is over. I can't wait!

I took my web design business to the next level and a few years later, our daughter was born and we had a new adventure. When our daughter started school, I knew I wanted to quit my day job to become a part time web designer. I resigned from my day job and started my freelance web design career in September 2011, just as the Photoshop Creative Cloud was launched. I started off as a freelancer, and I still am as of 2016 when we relocated across the country and I started my own company. Because Photoshop CC is native multi-view applications and uses both the designability of G-SYNC technology and the rendering power of the latest GPUs for jaw-dropping visuals, the native application will always have smooth, tear-free rendering and no additional video decoding in PSD files. On the other hand, files created in earlier versions of Photoshop will be 64-bit protected PSD files that only use the designated 4GB of working file space. By contrast, the legacy PSD format will be a standard 32-bit format that uses a small amount of file space.
