### Share for Review

Giving creators new tools to easily collaborate on projects alongside Photoshop is an important part of how Adobe imagines the future of creativity. As part of the new Share for Review feature in Photoshop, that vision is now a reality. Users can create, save and publish projects directly inside Photoshop. Up to five Creators can work on a project together from multiple devices at once. Plus, users can annotate and leave notes within the project. New shortcuts make it even easier to collaborate on ideas and keep projects on track. **Enabling Selections Made Easy**

Ensuring accurate selections is a key challenge when editing images. By using AI, Photoshop can learn specific criteria to identify unwanted areas and work out which objects are subject to a selection based on those characteristics. This makes it simple to make selections as precise as possible. It can even handle images with a large number of objects, or extremely complex content. Once a selection is made in Photoshop, Sensei makes it easier to map the correctly positioned, derivative coordinates and group them to represent the exact objects that need to be reshaped or removed first. If a person’s face isn’t placed exactly correctly in relation to other elements in an image, Sensei can showcase the challenges and make the user aware of their choices. **Weaving Files into the Cloud**

When working in Photoshop and other Adobe Creative Cloud apps, users can access and edit files stored in the cloud. They can even reuse editing commands from those collections, making everyday

workflows much more painless. These edits update automatically in the cloud, making it easy to collaborate with anyone— whether they're accessing the edits on all their devices, working on a Chromebook over a low-bandwidth connection, or even a compatible iOS or Android device.

From here, the application has become even more personal by making drafting, improving and editing a project simpler to do along the way. Share for Review allows anyone to view a project they've worked on right from within Photoshop with a simple click. There, they can annotate and touch up individual files and comments. Additionally, they'll see all recent comments and files from that specific project on screen before saving or exporting. When the time is right, Photoshop's editors can also easily present and share projects back into CorelDraw, PDF and Sketch apps. While with Share for Review, users can still open projects and amendments in different ways, such as from Explorer panels, Workspaces and tabs. Brand new in Photoshop Creative Cloud, the app redefines image editing from a two-step process of finding an image and starting to edit, to a seamless and fluid workflow. Instant Preview strips away the traditional timeline and converts editing into a fluid, collaborative experience with an infinite canvas, where users can see the changes happening in real time. For those who prefer an all-in-one workflow, Photoshop now makes cloud-based editing easier by providing access to universal assets directly from the search results, including layers, artwork, designs, and similar library files. Software updates and updates to hardware are critical for Adobe customers. While many understand the importance of these updates, some lead to frustration, delays and difficulty for customers. While there is no way to predict the frequency of future software product releases, for those who can't wait, we encourage customers to have access to the latest updates by checking for updates in Photoshop Elements or Photoshop.

You should be able to take advantage of a new file type natively in the new version of Adobe Photoshop - **PSD-A2** - in the week. This change is already in the development version of Photoshop software. The feature marks the successful integration of the Eye-Fi system. The new Photoshop also features a new orientation feature that can be used to rotate the images, providing the best solution when the user needs to share his work and images via the social networks. Photoshop will automatically import and enjoy a wide range of new features when you open this new file type after the 2019 update. So, as part of the Creative Cloud 2020 release we're using the.photoneo extension instead of the.psd file extension. The new format will support all the behavior and usage of Adobe's previous file format.psd files, but will enable you to take full advantage of some of the new features. For example, you can easily lock/unlock layers, and see exactly which pixels were masked.
